

Step 1. Fold according to the crease pattern so that each quadrant looks as in step 2.

NOTES:

*Blue line = valley fold, red line = mountain fold.

*Begin folding the model with the white side up.

*TIP: To begin precreasing, crease the diagonals of the square. Then kite fold, creasing all the way, and unfold at each corner.

*In the crease pattern, only the necessary creases are shown. If you follow the tip, you will have some extraneous creases showing on the final model.

Step 2. Here is one quadrant of the result of the crease pattern. **Left:** The flattened quadrant. **Right:** The quadrant with the two white corners on the right side of the left photograph (rear corners) separated, making the model 3D.

Step 3. Figure out how to finish each corner with a fin by looking at the photograph on the right and the final product (shown on website: <http://new-iti.300m.us/iti-origami/ITIorigami.shtml>).
